MOHAMED RAMADAN

Flutter Developer | Cross-Platform Mobile Applications
mormdn@outlook.com · +20 128 110 0168 · Mansoura, Egypt
mormdn.com · linkedin.com/in/mormdn · github.com/MoRmdn

PROFESSIONAL SUMMARY

Flutter Developer with 5+ years of experience building and shipping production applications for Android and iOS across healthcare, e-commerce, and field-service domains. Strong in Flutter, Dart, Bloc, Riverpod, Firebase, offline-first architecture, secure multi-role workflows, and Arabic RTL localisation. Experienced working remotely with distributed teams across MENA and Europe.

TECHNICAL SKILLS

Core Flutter, Dart, BLoC/Cubit, Riverpod, GetX

Mobile Development Cross-platform development (Android, iOS), offline-first synchronisation, on-device PDF generation, barcode and QR scanning, localisation and RTL (Arabic), payment gateway integration (Stripe, PayPal, Moyasar, Fawry, and others)

Back End and Cloud Firebase (Authentication, Cloud Firestore, Storage, Cloud Functions, Remote Config, Crashlytics, Analytics), Firestore Security Rules, Supabase, PostgreSQL, row-level security, RESTful APIs, GraphQL, Socket.IO, Pusher, SQLite, Hive

Design and Architecture Clean Architecture, feature-first architecture, SOLID principles, object-oriented programming, responsive design

Tools and Practices Git, GitHub, GitFlow, Agile SDLC, Google Maps API, Google ML Kit, unit and widget testing, Vite, Vitest

Additional JavaScript, React, Next.js

PROFESSIONAL EXPERIENCE

MisMar | Saudi Arabia January 2025 – Present
Flutter Developer · Remote, Contract, full-time

- Develop and maintain MisMar, an Arabic-first (RTL) vehicle maintenance and repair platform for drivers in Egypt, on iOS and Android, covering a seven-stage service flow from request and collection through inspection, quotation, and repair to delivery.
- Implement state management across Provider, Riverpod, and Bloc according to the complexity and data flow of each feature, and connect the app to back-end services through RESTful APIs and GraphQL.
- Own the performance, scalability, and maintainability of the production codebase, with unit and widget tests and pull-request review on a Git branching workflow.

Demeter | Morocco March 2023 – January 2025
Mid-Level Flutter Developer · Remote, Contract, full-time

- Led development of Lpermis from initial architecture to release, using GetX for state management across a driving-theory testing and appointment-booking product for driving schools across Morocco, live on the App Store and Google Play.
- Built Lpermis Pro, the companion edition for schools, on Cubit, handling multi-role lesson booking and the business logic for driving schools managing bookings across several user types.
- Integrated external APIs for real-time tracking, user authentication, and payment processing, and worked with designers to deliver a consistent experience across mobile and tablet.

Ebdda LTD | Libya January 2024 – January 2026
Mid-Level Flutter Developer · Remote, Contract, part-time (concurrent)

- Developed Mutabbib, a medical social network connecting patients with hospitals, clinics, and doctors, live on the App Store and Google Play. Used Bloc to manage complex user flows, real-time data synchronisation, and secure storage aligned to healthcare data requirements.
- Built real-time notification and scheduling features for patient–provider interaction, increasing appointment bookings by 25%.
- Coordinated with back-end developers on API integration to meet performance and security requirements.

Arcit-AI | Saudi Arabia December 2023 – December 2024
Mid-Level Flutter Developer · Remote, part-time (concurrent)

- Developed the Arcit-AI application on Bloc: a social networking platform matching service providers with clients in the architecture and home-improvement sector, with AI-driven tools for matchmaking and task automation. Formerly on the App Store and Google Play.
- Worked with data science and back-end teams on AI model integration and real-time data delivery.
- Designed and optimised the data-interaction interface, improving user retention and engagement by 15%.

Eleven Stars | Türkiye March 2023 – February 2024

Mid-Level Flutter Developer · Remote, part-time (concurrent)

- Built Saber Yamen, a multi-vendor e-commerce platform for new and used items, from scratch on GetX, covering navigation and data flow across the full purchase journey; live on the App Store and Google Play.
- Developed Dental Dinar on Cubit, covering real-time appointment scheduling, patient data synchronisation, and payment integration.
- Optimised state management to reduce data load times by 20% for both client and administrator users.

EARLIER EXPERIENCE

Bracket Media Ltd | United Kingdom May 2022 – January 2023

Junior Flutter Developer · Remote

- Led the migration of the company's primary application to Null Safety and redesigned major UI components, increasing user satisfaction and engagement by 15%.

Cyparta | Egypt April 2021 – May 2022

Junior Flutter Developer · full-time

- Delivered a multi-platform application with integrated analytics, improving user retention by 12%; reduced application size by 20% by removing unused packages and optimising assets; extended the interface to full-screen tablet layouts.

KEY PROJECTS

AYCO — Maintenance Reports — Arabic-first (RTL) field-service reporting application for a medical-equipment maintenance company: device serial scanning with registry auto-fill, signature capture, on-device numbered PDF generation with QR archival, and role-based administration. Built solo end-to-end on Flutter and Firebase. *Private client delivery — internal distribution.*

- Made every write offline-safe by racing Firestore writes against a timeout and surfacing the result as queued rather than failed, so technicians complete visits without connectivity.
- Batched up to 100 devices per visit in resumable 25-report transaction chunks to stay within the Firestore transaction limit, with report numbers issued transactionally.
- Enforced a three-role permission model server-side in Cloud Functions and security rules, and shipped two build flavours bound to separate development and production Firebase projects.

More at mormdn.com — Dental Dinar, an Arabic-first oral-health companion; FreeDoc, doctor and patient booking for Algeria in Arabic, French, and English; and O'Permis, driving-school booking for Morocco. Screens and details for every app above.

WEB DEVELOPMENT

Extended into front-end web development in 2026, completing Scrimba's Learn JavaScript and Learn React courses, with Next.js fundamentals in progress.

JS Quest — A 100-question JavaScript course across ten categories and five sequentially unlocking chapters, built and shipped on React, Vite, and Supabase. Progress persists to PostgreSQL so a session resumes where it stopped; correct answers are withheld server-side behind row-level security and released only after an answer is committed, and scoring is recomputed in SQL rather than trusted from the client.

mormdn.com — This portfolio, built with Next.js, React, TypeScript, and Tailwind CSS and statically exported to Firebase Hosting. Every project and achievement is rendered into the served HTML with schema.org structured data, so the whole site is indexable by search engines and readable by screen readers.

EDUCATION

Bachelor's Degree in Computer Science — Bioinformatics August 2021

Faculty of Computer & Information Sciences, Mansoura University

- Graduation Project: Mobile Application Data Analysis and Visualization — Grade: A+.

CERTIFICATIONS

Learn JavaScript and Learn React, Scrimba (2026) · Android Basics Nanodegree, Udacity (2020)

LANGUAGES

Arabic — native. English — professional working proficiency.
