PROFESSIONAL SUMMARY

Flutter developer with over five years of experience building and shipping cross-platform mobile applications for Android and iOS. Delivery experience spans healthcare, e-commerce, driver education, field-service reporting, and AI-driven platforms, working across Bloc, Cubit, GetX, Provider, and Riverpod architectures. Practical back-end capability on Firebase, including Cloud Functions, Firestore security rules, and offline-first synchronisation, alongside Arabic-first right-to-left localisation. Delivered remotely to teams in Saudi Arabia, Morocco, Libya, Türkiye, and the United Kingdom.

TECHNICAL SKILLS

Languages and Frameworks — Dart, Flutter, Python, HTML, CSS

State Management — Bloc, Cubit, GetX, Provider, Riverpod

Mobile Development — Cross-platform development (Android, iOS), offline-first synchronisation, on-device PDF generation, barcode and QR scanning, localisation and RTL (Arabic), payment gateway integration (FlutterWave, PayU, PayPal, PayStack, Moyasar, Fawry, Stripe)

Back End and Cloud — Firebase (Authentication, Cloud Firestore, Storage, Cloud Functions, Remote Config, Crashlytics, Analytics), Firestore Security Rules, RESTful APIs, GraphQL, Socket.IO, Pusher, SQLite, Hive

Design and Architecture — Clean Architecture, feature-first architecture, SOLID principles, object-oriented programming, responsive design

Tools and Practices — Git, GitHub, GitFlow, Agile SDLC, Google Maps API, Google ML Kit, unit testing, widget testing

PROFESSIONAL EXPERIENCE

MisMar

Flutter Developer

January 2025 – Present

1 year, 8 months

- Develop and maintain cross-platform iOS and Android applications in Flutter, with responsibility for performance, scalability, and maintainability of the production codebase.
- Implement state management across Provider, Riverpod, and Bloc according to the complexity and data flow of each feature.
- Connect applications to back-end services through RESTful APIs and GraphQL.
- Integrate Google ML Kit and AI-driven features into production mobile applications.
- Translate Figma and Adobe XD designs into responsive interfaces across phone and tablet form factors.
- Write unit and widget tests, and manage source control in Git using branch strategies and pull-request review.

Demeter | Morocco

Medior Flutter Developer (Remote, Full-Time)

March 2023 – January 2025

1 year, 11 months

- Led development of Lpermis from initial architecture to release, using GetX for state management across a driving-theory testing and appointment-booking product.
- Built Lpermis Pro on Cubit, handling multi-role lesson booking and the associated business logic for driving schools managing bookings across several user types.
- Integrated external APIs for real-time tracking, user authentication, and payment processing.
- Worked with designers to deliver a consistent experience across mobile and tablet devices.

Ebdda LTD | Libya

Medior Flutter Developer (Remote, Part-Time)

January 2024 – January 2026

2 years

- Developed Mutabbib, a healthcare application, using Bloc to manage complex user flows, real-time data synchronisation, and secure storage aligned to healthcare data requirements.
- Built real-time notification and scheduling features for patient-provider interaction, reported to have increased appointment bookings by 25 percent.
- Coordinated with back-end developers on API integration to meet performance and security requirements.

Arcit-AI | Saudi Arabia

Medior Flutter Developer (Remote, Part-Time)

December 2023 – December 2024

1 year, 1 month

- Developed the Arcit-AI application on Bloc, implementing AI-driven predictive analytics and data-visualisation features supporting user decision-making.

- Worked with data science and back-end teams on AI model integration and real-time data delivery.
- Designed and optimised the data-interaction interface, reported to have improved user retention and engagement by 15 percent.

Eleven Stars | Türkiye

Medior Flutter Developer (Remote, Part-Time)

March 2023 – February 2024

1 year

- Built Saber Yamen, a multi-vendor e-commerce platform, from scratch on GetX, covering navigation and data flow across the full purchase journey.
- Developed Dental Diner on Cubit, covering real-time appointment scheduling, patient data synchronisation, and payment integration.
- Optimised state management to reduce data load times by 20 percent for both client and administrator users.

EARLIER EXPERIENCE

Bracket Media Ltd | England

Junior Flutter Developer (Remote)

May 2022 – January 2023

9 months

Led the migration of the company's primary application to Null Safety, and redesigned major UI components, reported to have increased user satisfaction and engagement by 15 percent.

Cyparta | Egypt

Junior Flutter Developer

April 2021 – May 2022

1 year, 2 months

Delivered a multi-platform application with integrated analytics, reported to have improved user retention by 12 percent; reduced application size by 10 percent by removing unused packages and optimising assets; extended the interface to full-screen tablet layouts.

KEY PROJECTS

AYCO — Maintenance Reports — Arabic-first (RTL) field-service reporting application for a medical-equipment maintenance company: device serial scanning with registry auto-fill, technician and client signature capture, on-device numbered PDF report generation with QR archival, offline-first synchronisation, and role-based administration. Built solo end-to-end on Flutter and Firebase (Authentication, Firestore, Storage, Cloud Functions). Private client delivery — internal distribution.

- Made every write offline-safe by racing Firestore writes against a timeout and surfacing the result as queued rather than failed, so technicians can complete visits without connectivity.
- Batched up to 100 devices per visit in resumable 25-report transaction chunks to stay within the Firestore transaction limit, with report numbering issued transactionally.
- Enforced a three-role permission model (super admin, admin, technician) server-side in Cloud Functions and security rules, and shipped two build flavours bound to separate development and production Firebase projects.

Arcit-AI — Social networking platform connecting service providers — companies, professionals, suppliers, and contractors — with clients in the architecture and home-improvement sector, featuring a matchmaking system and AI-driven tools for connection and task automation. Available on the App Store and Google Play.

Mutabbib — Medical social network connecting patients with hospitals, clinics, and doctors, with schedule and availability tracking. Available on the App Store and Google Play.

Lpermis and Lpermis Pro — Driving-theory testing and appointment-booking application for driving schools across Morocco, with a companion professional edition for schools to manage lesson bookings across multiple user roles. Available on the App Store and Google Play.

Saber Yamen — Multi-vendor e-commerce application for new and used items. Available on the App Store and Google Play.

EDUCATION

Bachelor's Degree, Bioinformatics

Mansoura University, Mansoura, Egypt

August 2021

- Final-year project graded A+, focused on mobile application data analysis and visualisation.

CERTIFICATIONS

- Google Flutter Developer Certification — Udemy, 2022
- Android Basics Nanodegree — Udacity, 2020
